LICENSE TO PUBLISH
INSTRUCTIONS FOR JOURNAL EDITORS

GENERAL INSTRUCTIONS

1. The journal needs this license for two reasons:
   a. the author agrees that the non-commercial use of the article will be governed by a Creative Commons License,
   b. the journal needs to get the author’s license for commercial use of the article, e.g. for subscriptions to the printed edition, if any library is interested therein.

2. Before making the license template available to authors, you need to choose the governing law. The choice of law may affect two matters: a. the scope of commercial license, b. the legal form of the agreement. The attached license assumes that under the law you have chosen:
   a. the scope of commercial license is at least as provided in Clause 9,
   b. it is enough that only the author signs this agreement, and you consent by default,
   c. a scanned copy received from the author by e-mail means a sufficient form of the agreement.

   If you have doubts over the above assumptions, please consult a lawyer specialized in the law, which you have chosen as governing the license.

3. If the license agreement appears related to one country only, please consult a lawyer before choosing the law of another country to govern the agreement.

4. Please fill the other fields, which are marked in yellow. Once you have filled all yellow fields, please forward the license to De Gruyter Open to have it posted on the journal webpage at http://degruyteropen.com.

5. In any of the special cases listed below, please proceed as advised there.

INSTRUCTIONS FOR SPECIAL CASES

US GOVERNMENT EMPLOYEES

EXPLANATION. A contribution prepared by a US federal government employee as part of the employee's official duties is in the public domain in the United States, so no copyright exists in it. In such case, the US government may reproduce, without charge, all or portions of the contribution and may authorize others to do so, for official US government purposes only, if the US government contract or grant so requires.

ACTION. If the corresponding author claims that he (or one or more of the other authors) is a US federal government employee, you can instruct him that he can sign the license as it is, because of the note “for U.S. government employees: to the extent transferable” in Clause 1.

UK GOVERNMENT EMPLOYEES
(this applies also to government employees of other Commonwealth countries, e.g. Canada, Australia)

EXPLANATION. The rights in a Contribution by an employee of a UK government department, agency, or other Crown body as part of his official duties, belong to the Crown. In such case, the license must be signed by an authorized Government agency representative and by all authors who are officers or employees of the U.K. Government and who prepared all or part of the Work as part of their official duties.

ACTION. If the corresponding author claims to be a UK government employee, you can instruct him that he can use the license as it is, but it must be signed by him and an authorized representative of
the government agency. If the corresponding author claims that one of the other authors is a UK
government employee, another license must be signed by him and an authorized representative of
the government agency. If the corresponding author claims that more than one of the other authors
are UK government employees, each of them must sign (along with an authorized representatives of
their government agencies) a license (if they are employed by the same agency, one such license is
fine).
In case the agency does not accept to sign our license, UK government authors should submit a
signed declaration form, which can be obtained via http://www.nationalarchives.gov.uk/documents/information-
management/Publication_of_articles_written_by_ministers_and_civil_servants/pdf_FINAL.pdf
Please include an acknowledgment of Crown copyright in the following form: © Crown copyright
[year of publication].

NIH MANDATE

EXPLANATION. Pursuant to NIH mandate, the accepted version of Contributions authored by NIH
grant-holders will be posted to PubMed Central upon acceptance. This accepted version will be
made publicly available not later than 12 months after publication. For further information, see

ACTION. If the corresponding author claims that the contribution has been authored by NIH grant-
holders, you can send him the link given above and inform that De Gruyter Open will post the
contribution to PubMed Central according to that policy.
