

PROCEDURE OF REVIEWING

Authors who are submitting the paper for publication, are conscious all works published in AMTM. Authors are subjected to an assessment of Reviewers and are giving consent to the procedure of reviewing. Sent articles are being subjected to the editorial formal evaluation.

Two independent Reviewers are being appointed to the evaluation of the each publication. The Editor is selecting the Reviewers most competent in given field. The Reviewer and Author of manuscript should not remain in close professional relationships. Reviewer cannot have business relations or kinship with the author of the paper.

Sent articles are never sent to Reviewers from the same institution from which the author comes. Works of Reviewers are confidential and anonymous. The review must have a written form and end with the explicit application about committing the article for the publication or rejecting it. In arguable situations the editorial section is appointing additional reviewers. Every article containing results of the experimental research is being directed also to the statistical editor.

The editorial section is applying the return of the review by Reviewers in time less than 4 weeks.
