

Guidelines for reviews of scientific papers

1. For the evaluation of each publication there are appointed at least two independent referees from outside research unit affiliated by the author of the publication .
2. The author or authors of publications and referees do not know their identities (double-blind review process); in other cases, the referee shall sign a declaration of no conflict of interests, whereby a conflict of interest is deemed when direct personal relationships occur between the referee and the author (in particular second degree kinship, marriage), professional relationships or direct scientific cooperation in the past two years preceding the year of preparation the review.
3. The written review contains explicit request of referee concerning the conditions of admission of scientific articles for publication or their rejection.
4. The names of the referees of individual publications or releases of a scientific journal are not disclosed.
